

Category: Stainless steel work
Manufacturer: MK Gilze

This format trolley is intended for changing format parts of, for example, a Multivac or MK Gilze packaging machine. Furthermore, the trolley can of course be used to lift other parts of the machine. The maximum weight that the trolley can lift in this version is 300KG at the same load.

The frame of the change car is made of stainless steel and can therefore also be used well in production areas where it needs to be cleaned daily.
